

Successful Breeding in a Few Steps!

MOULTING AND REST PERIOD	
Moulting	Rest
• Separate young and adult birds. • Housing in small groups - Avoid overcrowding. • Preventative treatments against pox. (Poulvac-P Canary) • Eventual treatment against coccidiosis, atoxoplasmosis and megabacteria. (F10) • Support immunity. (Bene-Bac Plus) • Make bathing water available.	• Respect the natural shortening of the daylight. • Well ventilated room. • Avoid heavy food and limit the quantity of soft food. • Check airways and wet eyes. (T-Plus, Ronella) • Support digestion. (Bene-Bac Plus) • Maintain a strict hygiene.

SUPPLEMENTS	
Through Water	Through Soft Food
• VIGO-CARNITINE Friday. General condition, muscle enhancing, combats excessive fatty deposits. • HEPATO-CHOL Saturday & Sunday. Improves the metabolism and the liver function. Helps the moult in a natural way. • MYCOSOL Optional during weekdays. Support of the immune system. Soothing effect on the airways. • BENE-BAC PLUS powder Source of probiotics. Helps digestion and increases resistance.	• VIT-AZ-MIN Twice a week. Unique source of amino acids, minerals, spore elements, calcium and spirulina. • AMINO-FORT Twice a week. Contains all amino acids, indispensable for type canaries and heavily feathered birds. Replaces other protein sources and strongly enhances the moulting. • MULTIVITAMIN + HEALTH OIL Optional twice a week. Increases resistance, provides extra energy and contains all necessary vitamins for daily addition to self-made food.
